Participatory Internet

Abstract: Participatory Internet (Green PI) to create an Internet with small and wearable smart boxes. By simply switching the boxes, they connect to each other and create a TCP/IP environment with a set of applications and services to communicate locally or globally via a gateway to set among the boxes. The conception of small, light boxes, with battery and embedding TCP/IP environment is unique. The Participatory Internet is a brand of Green Communications. It is visible as a WiFi hot spot access point and provides connectivity to any device (Smartphone, tablet or computer). Participatory Internet meets modern needs of connectivity ie, densification, mobility and energy saving. A set of requirements that are part of the 5G specifications.

Biography: Khaldoun Al Agha is the Co-founder and CEO of Green Communications. He is a professor at the University of Paris-Sud.
